PCB's:

4 Robotron PCB's (rom-ram-interface om metal panel)

2 Stargate PCB's (rom-ram-interface om metal panel)

1 Joust PCB (rom-ram-interface-power supply om metal panel)

10 williams video game sound boards

Donkey Kong PCB

MK 1 PCB

MK2 PCB

Capcom Bowl PCB

Jungle Hunt PCB

Spy Hunter Boardset (I believe a complete set)

a few Atari Boards like asteroids, centipede (not working)

One of those blue Marvel Capcom PCB's

The williams PCB's are clean, I stored them carefully. I saved them from my conversion days, I remembered to remove the batteries, most if not all should work or I wouldn't have saved them but are untested so are sold as-is.

Don't think the stargates work, one is missing all the rams.

The williams sound boards are sold as-is and I have no idea if they work or not.

The DK, MK1, MK2, CB, JH & SH PCB's are the same, were put away working but untested so sold as-is.

I also have at least 50 American Padlocks, keyed alike.

3 Asteroids monitors(not working)

2 or 3 old electrohome or WG 19" monitors.

a few coin doors

thanx
