I've released a new version of KEGS v1.32, an Apple IIgs emulator for Mac,
Windows, and Linux at: http://kegs.sourceforge.net/

Changes in KEGS v1.32 since v1.31 (11/22/23)
- Fix (dloc,x) in emulation mode to wrap as described at
      https://github.com/gilyon/snes-tests/tree/main/cputest
- Improve virtual hard drive in slot 7 to use a small driver at $C700 which
      uses WDM $C7,$00 to call back to KEGS for handling commands.
- Improve SCC8530 emulation to add support for RTxC as clock for higher speeds.
- Fix a GS/OS visual anomaly with the mouse cursor sometimes disappearing
      when moving upwards, due to Scanline interrupts not being taken
      properly.
- Support qkumba's code to run from $C050 by having get_remaing_opcodes()
      track time properly, and to have reads to $C050-$C057 call float_bus()
      before doing the softswitch action.
