   The new HP1630G logic analyzer is essentially a 1630D with more state
channels. I think HP is offering it because the 1630D didn't
handle the 16 bit micro disassember job adequately. Thus the 1630G with
65 state channels (if I remember right) will take care of this drawback
The 1630G however only has 8
timing (100Mhz) channels. The 1630D however does do a great job with
the 8 bit micros.
  The 1630G is upgradable from the 1630D for about $3K.
