For the past few months many people have inquired about non-Apple memory expansions. The folklore is that it shouldn't be impossible (if you want to play with a 4 level pc board), but no one has offered any details. This month's Dr. Dobb's Journal has a note indicating that they will tell us how to do it in next month's issue (Jan 85).

wishing I had > 512k in my 512k Mac
