Subject: Softcard problems

I had alot of problems with the Softcard in my II+, espcially when using the combination of CPM60 + my 80-column card. Apparently, the softcard has problems with the switching in and out of the memory in the language card. With 56K the problems seemed to have gone away. In the //e it has some problems with my extended 80-column card. Arggghh.. I'm seriously thinking of getting rid of it. Oh well, that's just about \$250.
