I have been looking for an assembler for the c64 and would like to find out more about MAE, MERLIN64 and MICOL Systems assembler before I pick one. I read the article about the MAE assembler, that was on the net, and it sounds like what I am looking for. But I have also read good things about the MERLIN64 assembler and the add for MICOL sounds interesting. What I would like to find out are the following, does the assembler work on large file, does it have the define date statment like 8080 assemblers and how easy is to to use. Thanks in advance.

I would be interested in seeing the responcees you get.
Could you send me the replies you get or post a summary to the net, please?

Happy Hunting
