Can someone send me a copy of the program to convert from binhex
format? We just recently starting receiving net.micro.mac and I see
all these neat programs that were uploaded but I have no way of getting
them to work on my mac. I have macterminal with macput but this
doesn't work unless the file is a .rsrc file in proper format to begin
with. I also have fromhex but this doesn't seem to get it either.
It's frustrating to always end up with a bomb on the screen!
