[]
 I have been using PC/IX since May 1984, and the Santa
Cruz Operation's port of XENIX for about one month. My subjective
opinion is that XENIX is faster, easier to install and generally
'better'. I am interested in other people's opinions of those
products and any other version of UNIX (TM) for personal computers.
My goal is to obtain objective evaluations in addition to subjective.
I will summarize responses and post to net.micro.
Thanks in advance,
David Green
