I cannot tell how long this is, and whose (Vice, Xorg, other) fault it is. But when I start VICE now I always get a window instead of full screen mode. It still worked some months ago. But there were probably some updates for VICE as well as Xorg and other components involved.

\*\*\* VICE Version 2.3 \*\*\*  
OS compiled for: Linux  
GUI compiled for: GTK+  
CPU compiled for: 80386  
Compiler used: GCC-4.7.1  
Current CPU: AMD K8

Btw. other emulators like MAME, MESS or E-UAE work in full screen mode.
